

FINAL PRESENTATION · PROGRAM CLOSURE

Learner Opportunity Performance Analytics

From raw exports to a validated, decision-ready dashboard

Here's the team presentation recording link:

What We'll Cover

Project & Dataset Overview

The problem, and the three datasets behind it

Our Analytical Journey

Four weeks: setup, cleaning, dashboarding, storytelling

Dashboard Walkthrough

The visualizations that power decision-making

Findings & Recommendations

What the data tells us, and what to do about it

The Problem We Set Out to Solve

Organizations offering multiple learning and career opportunities often lack a clear, unified view of opportunity performance and learner engagement across their Opportunity and Learner datasets.

Our Objective

Analyze the Opportunity and Learner datasets to evaluate opportunity performance, learner engagement, application trends, and reward/scholarship distribution — enabling data-driven decisions through a validated, interactive dashboard.

Every metric SQL-validated

One correctly joined data source

Built for real stakeholder decisions

Three Datasets, One Story

opportunity

5,713

records · 42 fields

Catalog of internships, courses, competitions, events, and more

learner_opportunity

14,779

records · 43 fields

Individual learner applications and their status through the lifecycle

status_mapping

14

records · 2 fields

Lookup table decoding numeric status codes into readable labels

A Four-Week Journey from Raw Data to Insight

Week 1

Setup & Exploration

Configured PostgreSQL, imported 3 raw datasets, and uncovered the first data quality issues

Week 2

Integration & Cleaning

Found the real join key after testing 3 false leads; cleaned 270 corrupted or duplicate records

Week 3

Dashboard & Validation

Built 8 SQL-validated KPIs and an interactive Looker Studio dashboard

Week 4

Storytelling & Closure

Synthesized findings into recommendations for stakeholders

Cleaning Made the Data Trustworthy

270 corrupted or duplicate rows removed

No valid join key existed — one was found and verified

Every column re-typed correctly (text → numeric/date/boolean)

99.4% of learner records now link to a real opportunity

Where Learner Interest Concentrates

Who's Winning — and Who's Finishing

Top 5 by Sign-ups

Top 5 by Completion Rate (min. 5 apps)

How Rewards and Support Are Allocated

Top 5 by Reward Count

Scholarship Value by Category

Where Learners Are Coming From

Coverage note

Social Media is the single largest acquisition channel, contributing over 40% of applications with a recorded source — 70% more than the next channel.

This field is populated on 60.3% of learner records. The remaining 39.7% have no recorded lead source — a coverage gap worth closing at the point of application.

Application Momentum Over Time

Last 6 Months

Q4 2025 vs Q1 2026

-31.7% decline quarter-over-quarter

Application Trends - Last 6 Mnths

What the Data Is Telling Us

Internship-oriented opportunities dominate

Highest sign-ups, highest scholarship allocation — clearly the strongest performing category.

Enrollment doesn't guarantee completion

Several opportunities hit 100% completion; others sit well below 80% despite strong sign-up volume.

One channel drives the majority of growth

Social Media contributes the largest share of attributed applications — 70% more than any other source.

Momentum slowed into Q1 2026

Applications fell from 720 (Q4 2025) to 492 (Q1 2026) — a 31.7% quarter-over-quarter decline.

A meaningful slice of activity is untracked

39.7% of applications have no recorded lead source, and several opportunities are clearly test/placeholder records.

Incentives are unevenly distributed

366 opportunities (6.4%) carry zero rewards, while a handful concentrate double-digit reward counts.

Where We'd Focus Next

1

Investigate low-completion opportunities

Identify barriers — lengthy processes, unclear reward criteria — for opportunities completing below 80%.

2

Double down on Social Media, but diversify

It's the top channel by a wide margin; testing 1-2 underused channels reduces single-source dependency.

3

Monitor and act on the Q1 2026 dip

Investigate whether it's seasonal or campaign-related, and plan outreach ahead of historically slower periods.

4

Close the lead-source tracking gap

Make source capture mandatory at application time to shrink the 39.7% untracked share.

5

Clean up test/placeholder opportunities

Remove or flag single-application test records before they reach stakeholder-facing reports.

CONCLUSION & NEXT STEPS

From Messy Exports to a Trusted Dashboard

What began as two disconnected, corrupted datasets is now a single, SQL-validated view of opportunity performance and learner engagement — ready to inform real decisions about where to invest, what to fix, and where to grow.

- ✓ Automate the dashboard refresh so it always reflects the latest data
- ✓ Extend validation to a live monitoring alert for quarter-over-quarter drops
- ✓ Partner with the platform team to close the lead-source tracking gap

Thank you.
